Modern Trends in Physiological Sciences, Volume 3: Cholinesterases: A Histochemical Contribution to the Solution of Some Functional Problems covers the histochemical aspects of humoral and tissue cholinesterases, both inside and outside of the nervous system.

This volume is composed of three parts encompassing 14 chapters. The first part describes the link between cholinesterases and serum and between acetylcholinesterase and erythrocytes. This part also deals with the histochemical measurement of acetylcholinesterase activity in the erythrocytes or platelets of some mammalian species, with an emphasis on delineating the possible role of this enzyme in maintaining the integrity of these cells. The remaining two parts discuss the convergence of morphological, physiological, and biochemical research on tissue cholinesterases. These parts also describe the general features of the localization of cholinesterases at nerve-endings in tissues and organs. Histochemical investigations of tissular cholinesterases outside the nervous system, such as in smooth muscle fibers, are also presented. This book will be of value to physiologists, enzyme scientists and researchers, cell biologists, and histochemists.
