George Berkeley was considered "the most engaging and useful man in Ireland in the eighteenth century". This hyperbolic statement refers both to Berkeley's life and thought; in fact, he always considered himself a pioneer called to think and do new things. He was an empiricist well versed in the sciences, an amateur of the mechanical arts, as well as a metaphysician; he was the author of many completely different discoveries, as well as a very active Christian, a zealous bishop and the apostle of the Bermuda project. The essays collected in this volume, written by some leading scholars, aim to reconstruct the *complexity* of Berkeley's figure, without selecting "major" works, nor searching for "coherence" at any cost. They will focus on different aspects of Berkeley's thought, showing their intersections; they will explore the important contributions he gave to various scientific disciplines, as well as to the eighteenth-century philosophical and theological debate. They will highlight the wide influence that his presently most neglected or puzzling books had at the time; they will refuse any anachronistical trial of Berkeley's thought, judged from a contemporary point of view.
