Essential Immunology for Surgeons Oleg Eremin, Herb Sewell

There has been a huge increase in the knowledge and understanding of the immunological processes involved in surgical practice in recent years. Anaesthesiologists and intensive care physicians are increasingly recognising the significant derangements of immune function in the critically ill patient and the possible therapeutic approaches to manage such patients (including new approaches in transplantation rejections, novel vaccination strategies in cancer treatment, as well as a better understanding of the beneficial effects of standard chemotherapy).

Written by recognised experts in their field from both the UK and the US, and extensively referenced for further reading, *Essential Immunology for Surgeons* provides a concise, up-to-date, and readable account of immunology in general and its translation into key areas of clinical practice. It provides the necessary foundation for a critical understanding of this essential and rapidly expanding area of biological science that underpins and explains the modern concepts of a range of diseases and conditions, encompassing autoimmunity, infection, trauma, cancer, nutrition, organ transplantation, and various forms of therapy.

Previously published as *Immunological Basis for Surgical Science and Practice*, this fully-updated textbook is aimed predominantly at the surgical trainee, but will also be of value to undergraduate and postgraduate clinicians of any discipline who wish to have a better understanding and knowledge of the subject, as well as to researchers studying the various core topics discussed in the book.
