## Hypertext and Cognition

The recent evolution of western societies has been characterized by an increasing emphasis on information and communication. As the amount of available information increases, however, the user -- worker, student, citizen -- faces a new problem: selecting and accessing relevant information. More than ever it is crucial to find efficient ways for users to interact with information systems in a way that prevents them from being overwhelmed or simply missing their targets. As a result, hypertext systems have been developed as a means of facilitating the interactions between readers and text. In hypertext, information is organized as a network in which nodes are text chunks (e.g., lists of items, paragraphs, pages) and links are relationships between the nodes (e.g., semantic associations, expansions, definitions, examples -- virtually any kind of relation that can be imagined between two text passages). Unfortunately, the many ways in which these hypertext interfaces can be designed has caused a complexity that extends far beyond the processing abilities of regular users. Therefore, it has become widely recognized that a more rational approach based on a thorough analysis of information users' needs, capacities, capabilities, and skills is needed. This volume seeks to meet that need.

From a user-centered perspective -- between systems and users -- this volume presents theoretical and empirical research on the cognitive processes involved in using hypertext. In so doing, it illustrates three main approaches to the design of hypertext systems:

- \*cognitive, which examines how users process multilayered hypertext structures;
- \*ergonomical, which explores how users interact with the design characteristics of hardware and software; and
- \*educational, which studies the learning objectives, frequency and duration of hypertext sessions, type of reading activity, and the user's learning characteristics.

This volume also tries to provide answers for the questions that have plagued hypertext research:

- \*What is hypertext good for?
- \*Who is hypertext good for?
- \*If it is useful for learning and instruction, then what type?
- \*What particular cognitive skills are needed to interact successfully with a hypertext system? Anyone interested in the fields of computer science, linguistics, psychology, education, and graphic design will find this volume intriguing, informative, and a definitive starting point for future research in the field of hypertext.

### From reader reviews:

#### **Jennifer Darby:**

Book is definitely written, printed, or created for everything. You can know everything you want by a reserve. Book has a different type. We all know that that book is important issue to bring us around the world. Adjacent to that you can your reading expertise was fluently. A e-book Hypertext and Cognition will make you to be smarter. You can feel a lot more confidence if you can know about every little thing. But some of you think which open or reading some sort of book make you bored. It is not necessarily make you fun. Why they might be thought like that? Have you looking for best book or acceptable book with you?

#### **Timothy McKinney:**

The e-book with title Hypertext and Cognition contains a lot of information that you can find out it. You can get a lot of help after read this book. This specific book exist new knowledge the information that exist in this publication represented the condition of the world right now. That is important to yo7u to find out how the improvement of the world. This kind of book will bring you in new era of the the positive effect. You can read the e-book in your smart phone, so you can read this anywhere you want.

#### **Eva Sexton:**

This Hypertext and Cognition is new way for you who has interest to look for some information since it relief your hunger associated with. Getting deeper you in it getting knowledge more you know or perhaps you who still having tiny amount of digest in reading this Hypertext and Cognition can be the light food for you personally because the information inside that book is easy to get through anyone. These books develop itself in the form which can be reachable by anyone, yes I mean in the e-book web form. People who think that in e-book form make them feel tired even dizzy this guide is the answer. So there is no in reading a publication especially this one. You can find actually looking for. It should be here for anyone. So , don't miss this! Just read this e-book kind for your better life along with knowledge.

#### **Hector Duggan:**

A lot of publication has printed but it takes a different approach. You can get it by internet on social media. You can choose the best book for you, science, comedian, novel, or whatever through searching from it. It is known as of book Hypertext and Cognition. You can add your knowledge by it. Without departing the printed book, it can add your knowledge and make you happier to read. It is most important that, you must aware about e-book. It can bring you from one destination for a other place.
