A Systemic-Structural Theory of Activity: Applications to Human Performance and Work Design

Gregory Bedny, Waldemar Karwowski

The last several decades have demonstrated dramatic technological changes that influence work conditions in all applied domains, including manufacturing, transportation, and human-computer interactions. These changes require new approaches to the study of human performance. Activity theory, in particular has become increasingly popular with those who study human work dynamics.

A Systemic-Structural Theory of Activity: Applications to Human Performance and Work Design

discusses general activity theory (AT) and introduces systematic structural activity theory (SSAT) and its applications to the study of human work.

The book contains multiple practical examples of systemic-structural theory of activity analyses, including a study of production operations in the manufacturing environment, system safety evaluation, work improvement, equipment design, and robot system performance. It also provides examples of the design of human/computer interaction tasks, training, efficiency, work motivation, fatigue, personality, and individual style of performance.

This book addresses the wide audience of psychologists working in fields such as Industrial/Organizational Psychology, Experimental, and Cognitive Psychology. It can also be of use to computer science specialists and other professionals who study human work activity and education.
