Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) Benjamin Van Vliet

Over the next few years, the proprietary trading and hedge fund industries will migrate largely to automated trade selection and execution systems. Indeed, this is already happening. While several finance books provide C++ code for pricing derivatives and performing numerical calculations, none approaches the topic from a system design perspective. This book will be divided into two sections-programming techniques and automated trading system (ATS) technology-and teach financial system design and development from the absolute ground up using Microsoft Visual C++.NET 2005. MS Visual C++.NET 2005 has been chosen as the implementation language primarily because most trading firms and large banks have developed and continue to develop their proprietary algorithms in ISO C++ and Visual C++.NET provides the greatest flexibility for incorporating these legacy algorithms into working systems. Furthermore, the .NET Framework and development environment provide the best libraries and tools for rapid development of trading systems.

The first section of the book explains Visual C++.NET 2005 in detail and focuses on the required programming knowledge for automated trading system development, including object oriented design, delegates and events, enumerations, random number generation, timing and timer objects, and data management with STL.NET and .NET collections. Furthermore, since most legacy code and modeling code in the financial markets is done in ISO C++, this book looks in depth at several advanced topics relating to managed/unmanaged/COM memory management and interoperability. Further, this book provides dozens of examples illustrating the use of database connectivity with ADO.NET and an extensive treatment of SQL and FIX and XML/FIXML. Advanced programming topics such as threading, sockets, as well as using C++.NET to connect to Excel are also discussed at length and supported by examples.

The second section of the book explains technological concerns and design concepts for automated trading systems. Specifically, chapters are devoted to handling real-time data feeds, managing orders in the exchange order book, position selection, and risk management. A .dll is included in the book that will emulate connection to a widely used industry API (Trading Technologies, Inc.'s XTAPI) and provide ways to test position and order management algorithms. Design patterns are presented for market taking systems based upon technical analysis as well as for market making systems using intermarket spreads.

As all of the chapters revolve around computer programming for financial engineering and trading system development, this book will educate traders, financial engineers, quantitative analysts, students of quantitative finance and even experienced programmers on technological issues that revolve around development of financial applications in a Microsoft environment and the construction and implementation of real-time trading systems and tools.

* Teaches financial system design and development from the ground up using Microsoft Visual C++.NET 2005.

* Provides dozens of examples illustrating the programming approaches in the book

* Chapters are supported by screenshots, equations, sample Excel spreadsheets, and programming code

From reader reviews:

John Dearman:

Do you have something that suits you such as book? The book lovers usually prefer to choose book like comic, brief story and the biggest an example may be novel. Now, why not seeking Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) that give your enjoyment preference will be satisfied through reading this book. Reading routine all over the world can be said as the method for people to know world much better then how they react to the world. It can't be claimed constantly that reading practice only for the geeky individual but for all of you who wants to always be success person. So , for all of you who want to start reading as your good habit, you are able to pick Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) become your starter.

Joseph Thomas:

You are able to spend your free time to read this book this publication. This Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology) is simple to develop you can read it in the recreation area, in the beach, train along with soon. If you did not get much space to bring the printed book, you can buy the actual e-book. It is make you simpler to read it. You can save typically the book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.

Dane People:

A lot of e-book has printed but it differs. You can get it by world wide web on social media. You can choose the most effective book for you, science, comedian, novel, or whatever through searching from it. It is called of book Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology). You can add your knowledge by it. Without leaving behind the printed book, it could possibly add your knowledge and make you happier to read. It is most essential that, you must aware about publication. It can bring you from one place to other place.

James Wood:

What is your hobby? Have you heard this question when you got pupils? We believe that that query was given by teacher to their students. Many kinds of hobby, Everybody has different hobby. And you know that little person such as reading or as reading become their hobby. You need to know that reading is very important and also book as to be the point. Book is important thing to incorporate you knowledge, except your own teacher or lecturer. You see good news or update with regards to something by book. Many kinds of books that can you go onto be your object. One of them is actually Building Automated Trading Systems: With an Introduction to Visual C++.NET 2005 (Financial Market Technology).
